polyWatch®

PLASTIC POLISH

Plastic watch crystals scratch very easily and they soon look unattractive. Replacement of the crystal is not normally possible, especially where watches have plastic cases. Watch owners the world over suffer from this sort of problem, but now polyWatch, a new type of special purpose polishing paste, offers them an extraordinarily simple solution. For the first time, consumers can remove scratches rapidly and cheaply from their plastic watch crystal by carrying out an easy-to-follow "do-it-yourself" procedure.

- Globally the No.1 Repair-Polish for acrylic watch crystals
- Professional results, also for deeper scratches
- TÜV certificate for proven effectiveness

MADE IN GERMANY

Content: Set incl. tube (5g) and microfiber cloth

polyWatch®

- **All-Inclusive Kit**

Sales display with 6 sets

polyWatch Plastic Polish – how it works:

The plastic crystal is very slightly dissolved and ground down by tiny abrasive particles. The edges of the scratch marks are then smoothed off and the cracks filled in with some of the original plastic from the watch crystal.
